3. https://autolead-pros.lovable.app

❖ ROI :

- **Before Automation:** 50 leads/week × 15 minutes = 750 minutes (12.5 hours) per week.
- **After Automation:** 50 leads/week × 0.5 minutes = 25 minutes per week.
- **Savings:** You are saving the company **12+ hours every week**, which equals roughly 50 hours a month.

❖ Summary : Service Offering: AI-Powered Lead Response System

➢ The Problem: The "Cost of Silence"

Most small businesses lose up to **40% of their potential revenue** because they take too long to respond to new inquiries. If a lead has to wait 15 minutes or more, they have likely already moved on to a competitor.

➢ The Solution: Instant AI Engagement

I build a custom, no-code automation platform that ensures no lead is ever left waiting. By integrating **Google Forms**, **OpenAI**, and **Make.com**, I transform your lead intake into a 24/7 sales machine.

➢ Key Features of the System:

- **Instant AI Analysis:** Every inquiry is read by a custom-trained AI model that understands the client's specific needs.
- **Personalized Responses:** Instead of generic templates, the system sends a human-like, professional email tailored to the lead's business challenge within 30 seconds.
- **Automated CRM Logging:** Every interaction is automatically tracked in a centralized dashboard (Google Sheets/Lovable) for your sales team to follow up on.

➢ Quantifiable Business Value:

- **Time Efficiency:** Reduces manual lead processing from **15 minutes to under 30 seconds**.
- **Cost Savings:** Saves your team over **50+ hours per month** in manual administrative work.

- **Response Rate:** Increases the likelihood of conversion by engaging leads while their intent is at its highest.

➢ Investment:

- **Project Fee:** ₹15,000 – ₹40,000 (depending on workflow complexity).
- **Setup Time:** Fully deployed and tested within 3–5 business days.
